Jordan Atanasov

Being a developer is not a profession, it's a lifestyle of ever-growing desire to learn. In my almost 10 years of experience in the IT world, I have done everything in my power to teach myself how to develop in the working place and at a point - help others to grow.

I have experienced the whole stack of a software project. From the database layers, through the back end and business logics, passing through the front-end handlings of data and arriving at the pretty UI designs.

As a regional dev lead, I got a taste of the complicated craft of communicating with people. I am still learning how to help a colleague reach their full capacity as a professional and get the most satisfaction of the work atmosphere.
